

Supporting you with every angle of your practice

It's an obvious thought perhaps but planning really is vital to ensure you keep to your timeline and within your budget.

And that's where Henry Schein can help!

With so much to think about we can offer you support and guidance through the whole project. From concept and design to implementation all the way through to after care.

We also offer finance packages and various service plans for added protection.

Below are our **Top 10 Tips** to consider when planning your project.

Preparation is Vital

Think about the changes you want to make, remembering to consider what other building works may be required and what contractors you may need to complete the job.

Engaging the Customer

improve patient understanding and acceptance by using interactive technology through intraoral camera's, digital imaging and applicable software packages.

Consider Your Space

Having enough space to work in is critical, we can help you choose the right equipment, and work with you on where to place it to allow yourself and your assistant plenty of room to move around freely.

Waiting Room

In today's world it's imperative to ensure patients feel safe entering your practice, so providing optional masks and sanitiser on entry should be a consideration along with socially distanced seating. It's also recommended that people in the waiting room cannot see directly into the treatment room.

Patient Entry and Exit

We'll take into consideration the entry point of the room and whether the patient can get in and out easily.

Imaging Room

Locate your OPG and/or CBCT units in a separate dedicated room - this will need lead lining protection if there are partition walls.

Showcasing Your Technology

Have your high-tech tools such as lasers, scanners, CBCT and CAD/CAM equipment on display.

Multiple Surgeries

You may want to think about a central suction system to provide suction to all surgeries with security.

Privacy

Consider a specific consultation room, especially good for anxious patients.

Decontamination

It's best practice to have separate clean and dirty rooms, but space doesn't always allow for this. Our team can help design an infection prevention workflow that fits the space available while still meeting the ANZ standards.
